FIRE SYSTEMS

Kitchen Fire Systems

Using patented industry leading technology, we provide a world class solution for kitchen fires. We offer our kitchen system with a similar design & installation concept to current market leaders, using a fusible link detection system with manual pull & gas shut off, to allow easy integration. However, due to our unique application, agent & method our system is unparalleled to anything currently on the market.

Patented technology allows us to use water without chemicals for all kitchen fires including fat fires. We do offer a chemical alternative solution to rival the current market technology however our Dry Mist System is far superior to anything on the market as we use a refillable slave cylinder to drive multi cylinder reservoirs saving a considerable amount of kitchen space and cost. Our Dry Mist System takes minutes not hours or days to clean after a discharge, minimalising collateral damage and down time, in the cases of false alarms and real fires occurring.

We create a simple solution due to the application of a blanket of dry mist to the affected area, meaning a simple, minimal range of nozzles are required. Recharging and commissioning is cost effective, quick & clean.

Features of our system:

- Accidental discharge / false alarms no longer an issue as system uses water only
- Multi Risk (any fire class including fat fires)
- Low pressure dry mist with 25 micron droplet size
- Mist has excellent penetration & cooling ability inside ducting & extraction units
- Turns to steam and evaporates becoming dry in the event of a fire
- Dry mist means almost no collateral damage
- Clean up takes minutes not hours (no chemicals used)
- 100% environmentally friendly
- No mains water, power or pump required
- Smaller space requirement due to small reservoirs & discharge propellant used from 3Ltr /Min

If you have any queries about our Kitchen Fire Systems, please feel free to contact us at: Info@JewelFireSystems.com.

Suitable For:

- Commercial kitchens
- Restaurants
- Take aways
- Fast food outlets
- Food production facilities
